Introduction to Bootstrap

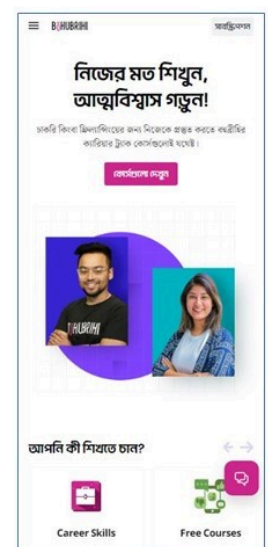

Why Bootstrap?

Bootstrap is a widely-used front-end framework that makes web development faster and easier. Here are some reasons why Bootstrap is beneficial:

1. **Responsive Design:** Ensures your website looks great on all devices, from phones to desktops.
2. **Pre-designed Components:** Comes with pre-styled components like buttons, forms, navbars, and modals.
3. **Consistency:** Maintains a consistent design across all web pages.
4. **Cross-browser Compatibility:** Addresses many browser inconsistencies.
5. **Ease of Use:** Simple to learn and implement, ideal for beginners.

Integrating Bootstrap into an HTML File

To integrate Bootstrap into your HTML file, follow these steps:

1. **Add Bootstrap CSS:** Include the Bootstrap CSS file in the `<head>` section of your HTML.
2. **Add Bootstrap JS:** Include the Bootstrap JavaScript and its dependencies at the bottom of the `<body>`.

Here is an example HTML file with Bootstrap integrated:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Bootstrap Integration Example</title>
  <!-- Bootstrap CSS -->
  <link
href="https://stackpath.bootstrapcdn.com/bootstrap/5.3.0/css/bootstrap.min.css"
rel="stylesheet">
</head>
<body>

  <h1 class="text-center">Hello, Bootstrap!</h1>

  <!-- Bootstrap JS and dependencies -->
  <script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
  <script
src="https://cdn.jsdelivr.net/npm/@popperjs/core@2.11.6/dist/umd/popper.min.js">
</script>
  <script
src="https://stackpath.bootstrapcdn.com/bootstrap/5.3.0/js/bootstrap.min.js">
</script>
</body>
</html>
```
